Biology is the natural science that studies life and living organisms, including their physical structure, chemical processes, molecular interactions, physiological mechanisms, development and evolution. Despite the complexity of the science, there are certain unifying concepts that consolidate it into a single, coherent field. Biology recognizes the cell as the basic unit of life, genes as ...

The human heart is a magnificent organ. The adult heart pumps about 1,500 to 2,000 gallons per day. I'm not going to get into a lot of details about the heart in the post right now because I'm gonna get more into it later. I just wanted to post a few 3D pictures of the human heart, because I think they are amazing. They were done by Patrick J. Lynch, medical illustrator for Yale University.

Show me a diagram of the human heart? Here are a bunch ...

There are many types of cells. In biology class, you will usually work with plant-like cells and animal-like cells. We say "animal-like" because an animal type of cell could be anything from a tiny microorganism to a nerve cell in your brain. Biology classes often take out a microscope and look at single-celled microbes from pond water.
