A manual transmission, also known as a manual gearbox, a standard transmission or colloquially in some countries (e.g. the United States) as a stick shift, is a type of transmission used in motor vehicle applications. It uses a driver-operated clutch, usually engaged and disengaged by a foot pedal or hand lever, for regulating torque transfer from the engine to the transmission; and a gear ...

First, it is the lifeblood that enables a transmission to transfer power from the engine to the pavement. The torque converter uses ATF to form a hydraulic circuit in order to transfer rotational force from the engine to the transmission.. Its second purpose is to cool the transmission by absorbing the heat created by all its moving parts and expelling the heat through the radiator.
