A power pack, or ignition module, is the device that controls the timing of ignition functions on all engine cylinders. Some power packs also have a S.L.O.W. (speed limiting operator warning) function that limits the RPMs the engine is capable of attaining. This is important to keep an engine from running at overly-high revolutions during operation.

A keypunch is a device for precisely punching holes into stiff paper cards at specific locations as determined by keys struck by a human operator. Other devices included here for that same function include the gang punch, the pantograph punch, and the stamp. For Jacquard looms, the resulting punched cards were joined together to form a paper tape, called a "chain", containing a program that ...
