If you are testing out your new boost capacitor, be sure you allow several minutes between startups of your A/C. This ensures that pressures within the A/C system equalize and the compressor motor will start much easier. If it's particularly hot out, the A/C system will have very high pressure on one side of the system after shutdown.

Shore Power: Here, obviously, you're tying into the larger electrical grid which (hopefully) doesn't shut off. But shore power runs at 120 volts and your battery stores at 12 volts. To convert things from one voltage or another, your RV will employ a "converter" (not a terribly creative name) or an inverter/charger.
