Physics (from Ancient Greek: φυσική (ἐπιστήμη), romanized: fisiké (epistémē), lit. 'knowledge of nature', from φύσις phýsis "nature") is the natural science that studies matter, its motion, and behavior through space and time, and that studies the related entities of energy and force. Physics is one of the most fundamental scientific disciplines, and its main goal is ...

Electricity would remain little more than an intellectual curiosity for millennia until 1600, when the English scientist William Gilbert wrote *De Magnete*, in which he made a careful study of electricity and magnetism, distinguishing the lodestone effect from static electricity produced by rubbing amber. He coined the New Latin word *electricus* ("of amber" or "like amber", from ἤλεκτρον ...

Introduction Over the past few years, ever since writing "If Susan Can Learn Physics, So Can You", I've been contacted by people from all backgrounds who are inspired and want to learn physics, but

don't know where to start, what to learn, what to read, and how to structure their studies. I've spoken with single mothers who want to go back to school and study physics, tenured philosophy ...

NOTE: The following stories seem to describe two kinds of "electric human" phenomena. One involves conventional static electricity, and the other is something more mysterious. If you *DON'T* get constant shocks when touching either people or metal objects, yet electronic devices often fail in your presence, then your problem is not strictly electrical.
