5 Clinical Assessment of Gait Olfat Mohamed, Dana Craig, Heather Worden and Edmond Ayyappa Learning Objectives On completion of this chapter, the reader will be able to: 1. Describe the major functional tasks of the gait cycle and their corresponding subphases. 2. Identify the muscle activity, ground reaction forces, and joint angles during each of the subphases...

Clinical Assessment of Gait | Musculoskeletal Key

This paper provides an introduction to the biomechanics of the ankle, introducing the bony anatomy involved in motion of the foot and ankle. The complexity of the ankle anatomy has a significant influence on the biomechanical performance of the joint, and this paper discusses the motions of the ankle joint complex, and the joints at which it is proposed they occur.

Biomechanics of the ankle - ScienceDirect

The anterior cruciate ligament (ACL) is one of a pair of cruciate ligaments (the other being the posterior cruciate ligament) in the human knee. The two ligaments are also called cruciform ligaments, as they are arranged in a crossed formation. In the quadruped stifle joint (analogous to the knee), based on its anatomical position, it is also referred to as the cranial cruciate ligament.

Nervous system disease - Localization of neurological disease: The nature and pattern of the symptoms and physical signs of neurological disease allow inferences to be drawn about the sites of the lesions causing them. One symptom indicating muscular disease is weakness, usually symmetrical (that is, affecting both sides of the body) and mainly affecting the proximal or girdle muscles.
